About Us Section
(scroll down to access)

First page of the website. It is also the landing page of the Evently social media platform. The page displays the unique selling points of Evently. Scrolling down the page, the names of the contributors along with the photos will be displayed. You can also log in directly to the social media platform from the page.
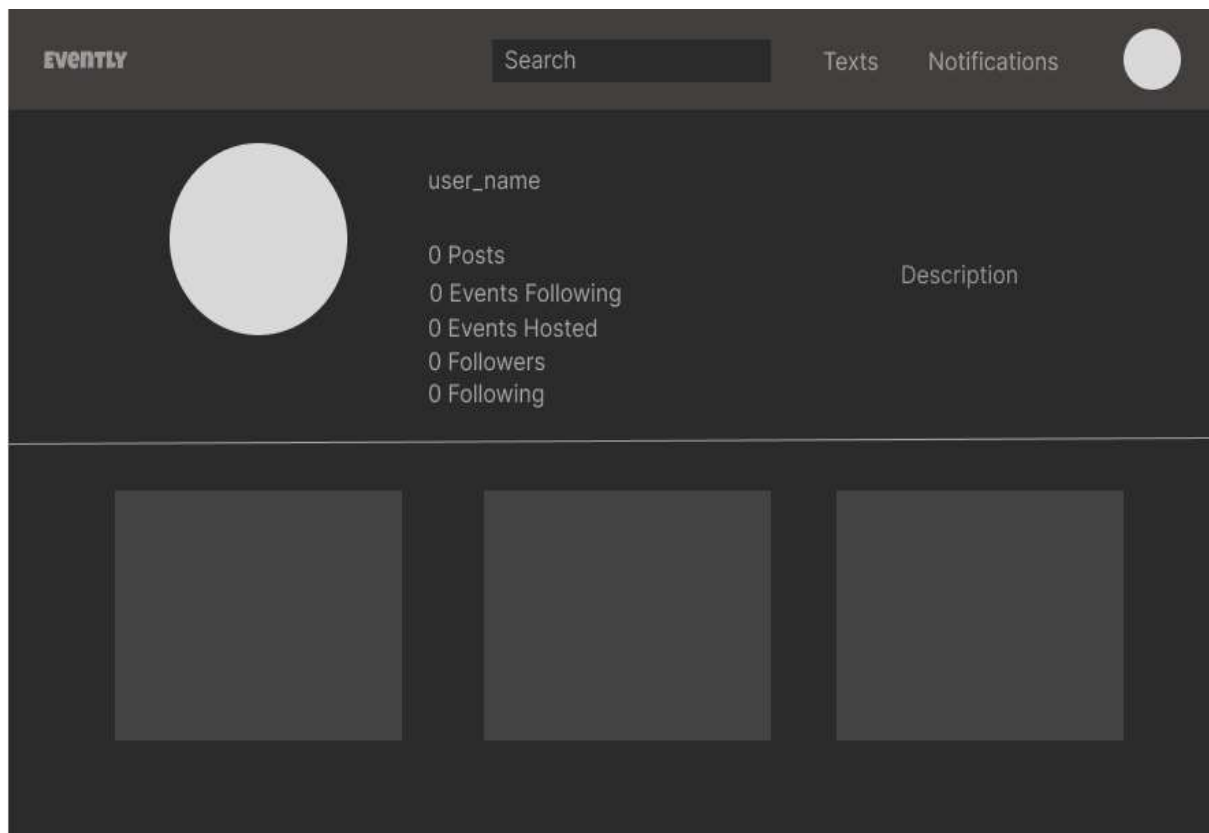

2. Login Page

The login page allows a user to gain access to an application by entering their username and password or by authenticating using a social media login. This is a general layout of a common login screen. A user can input the username and the password together to log in. New users can use the sign-up option available in the same page to open their accounts in the Evently social media platform.
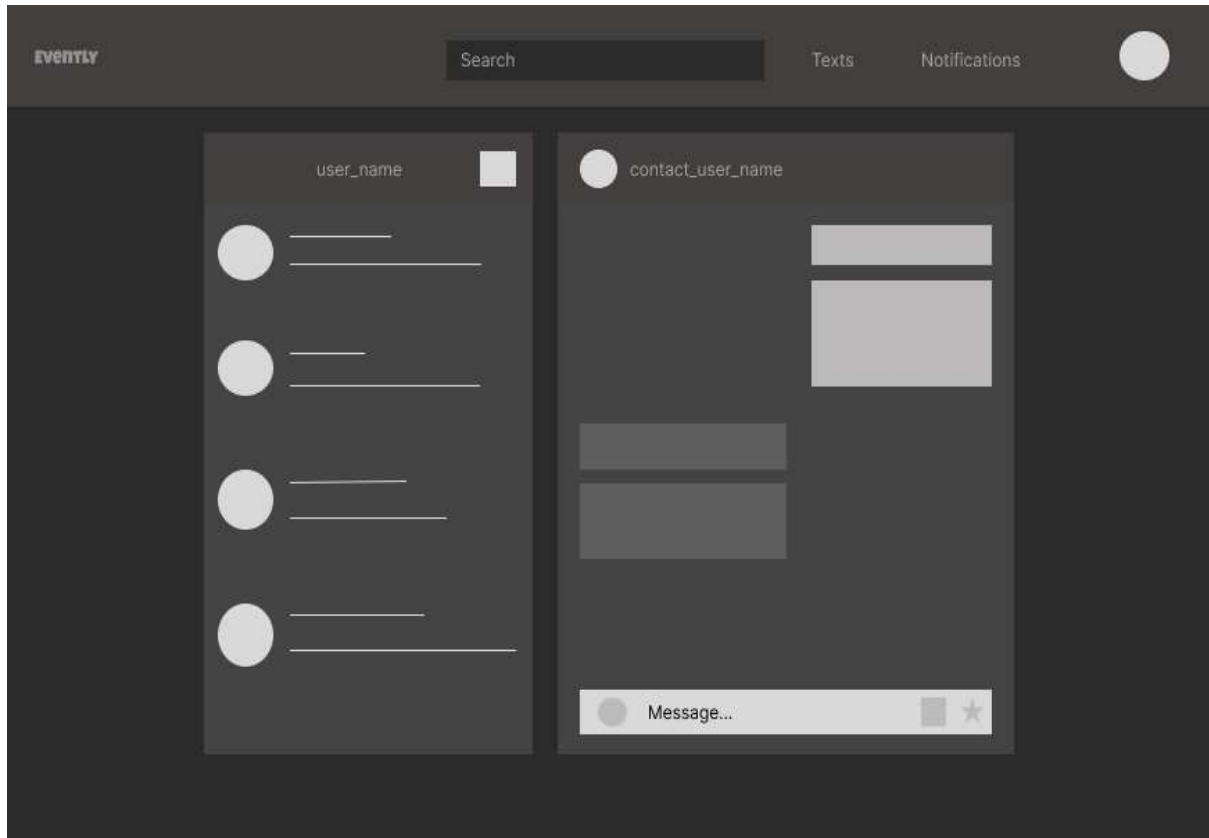

3. Feed Page

A feed is a stream of content that you can scroll through. The content appears in similar-looking blocks that repeat one after the other. The feed includes status updates, photos, videos, and links to various events attended by users of the platform. Detailed information about upcoming events is also displayed in the feed. The page allows you to create new posts or events. Additionally, the page suggests people that the user may know, making it easier for the user to follow such accounts.
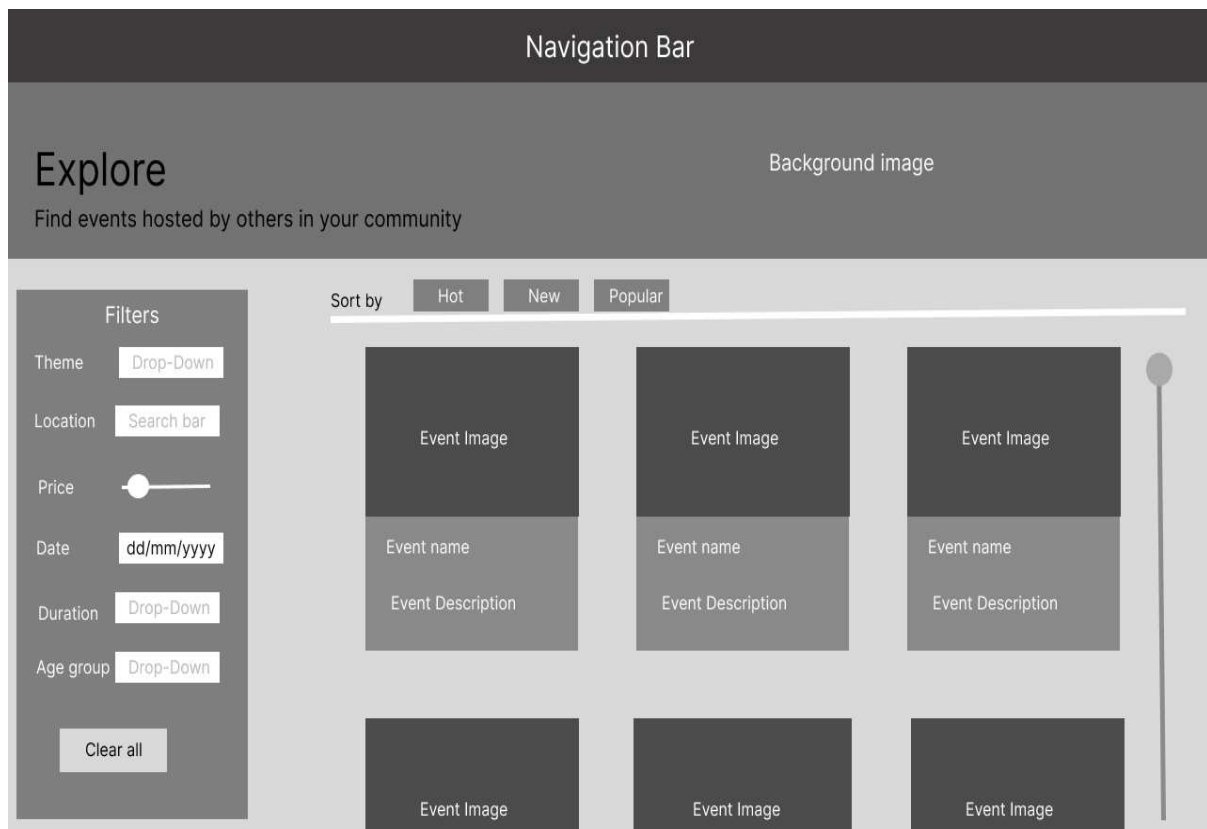

4. Profile Page

In the Evently social media platform, the profile page displays posts, followers, following counts, events hosted and events attended by users. Each user's profile photo is displayed along with their posts related to the events they have organised or attended. Users can also follow or unfollow accounts and events through the page. In addition, the user can directly access the direct message page from the page.
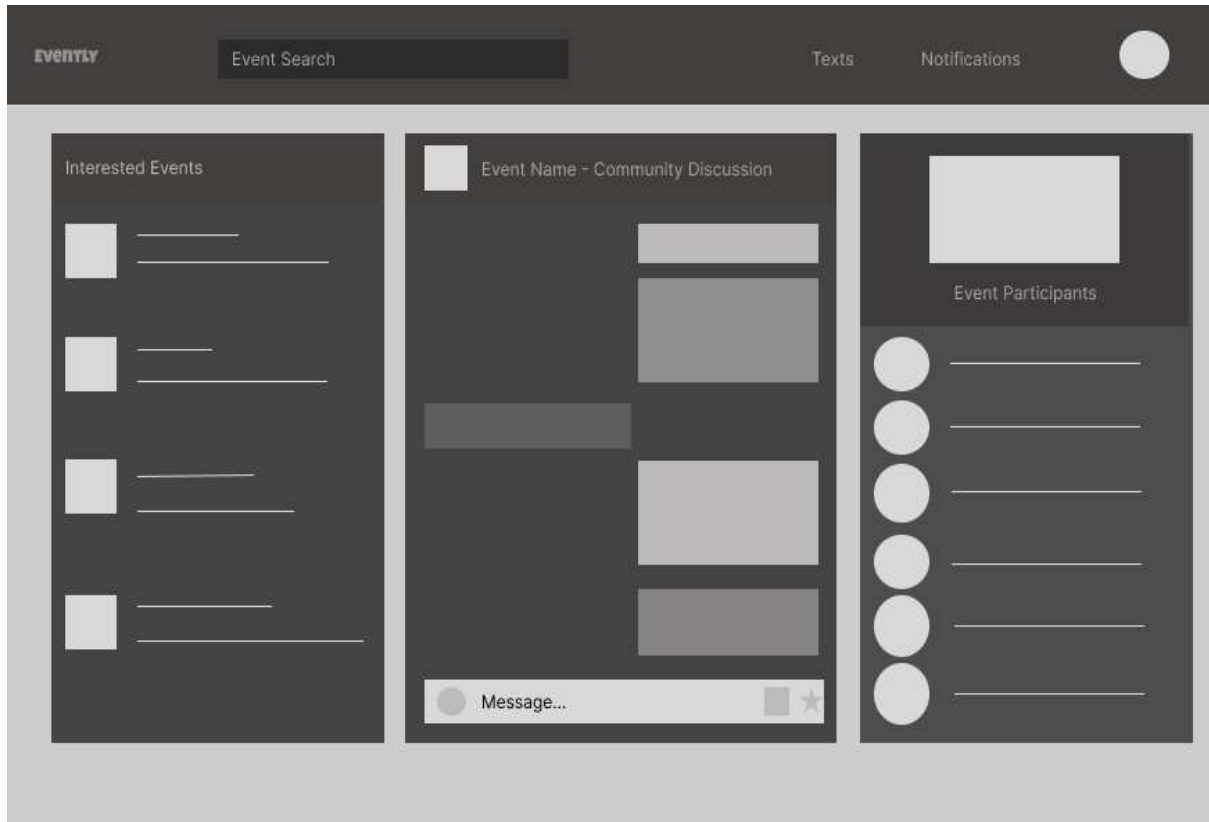

5. Direct Messenger

A direct message (DM) is a private form of communication between social media users that is only visible to the sender and recipients. The feature can be used to directly send messages to other users privately. The messenger also comes with options which can block and report a user. Messages can include plain text, emoticons, stickers, images, videos and document attachments.

6. Events Explorer Page

The events explorer page can be used to keep track of all events. The page displays the event names along with the event descriptions. User can mark the events which interest him/her, in a click. The events can be filtered based on the theme, location, price, date, time, duration and age group. Events can also be sorted based on the time of upload or alphabetically. Upon request of the user, the most trending events are also displayed on the same page.
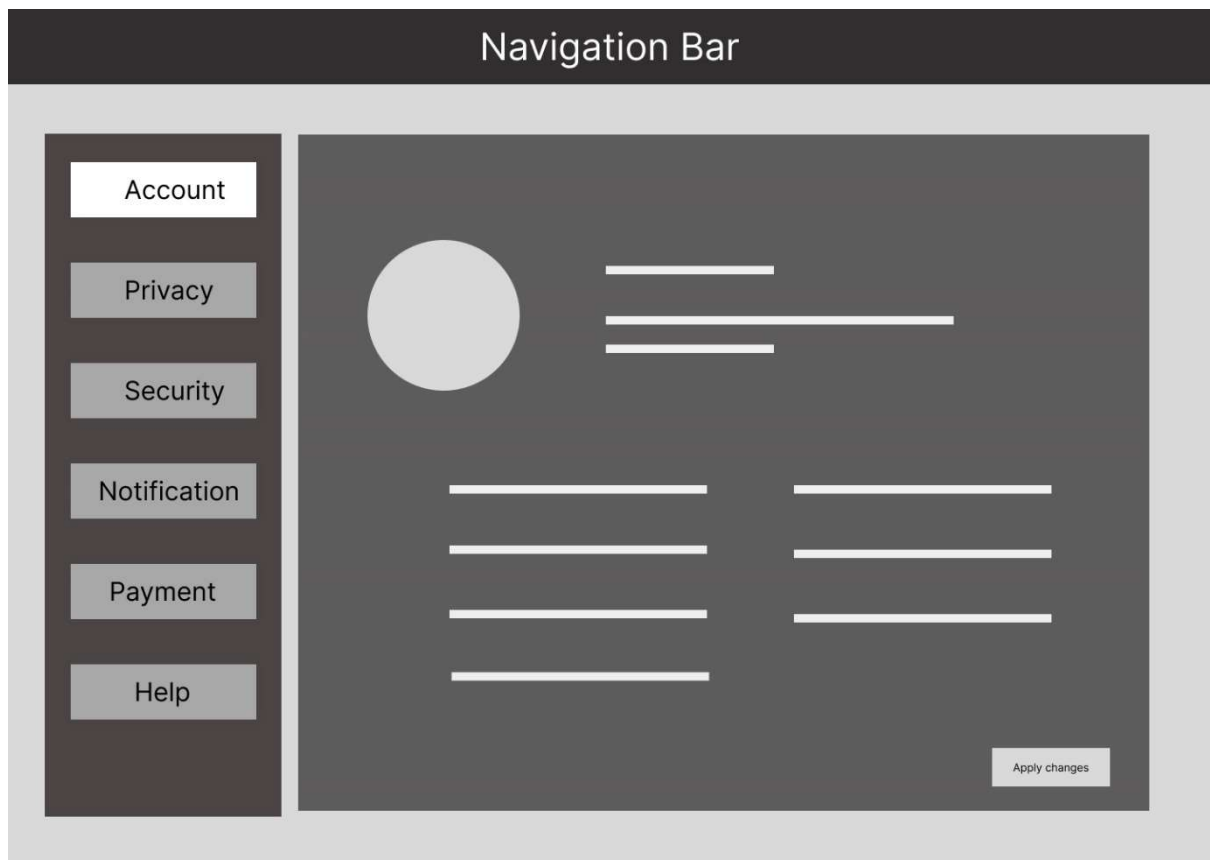

7. Community Discussion Page

The community discussion page of the Evently social media platform can be used to keep track of the events the user has registered. The page can be used to chat with other event participants and event organisers. Event organisers can make use of this platform to take suggestions from the event participants and understand their expectations. The page also displays all the users who have registered to attend the event. The page makes sure attendees of the events clarify and discuss all their doubts before the event starts and bridges the gap between the organisers and the attendees.

8. Settings

The settings page can be used to edit the user's profile page. Additionally, the page includes all settings related to Evently's privacy policies. The security tab allows the user to set the level of authentication, when they are logging in with a new device. The payments tab allows the user to store all his payment details, so that payments for paid events can be done effortlessly. The help option can be used by the user to report unusual activity in the account. Users can report any account using the same page.
